PSB & ASSOCIATES LLP

Complete Website Typography & Font Style Specification

Detailed audit of font families, styles, weights, and desktop/mobile sizes used across every section of all 25 pages in the current codebase.

Core Fonts Installed in Codebase:
- **Manrope (Sans-serif)**: Headings, numerical metrics, partner titles, and logo subtitle.
- **DM Sans (Sans-serif)**: Body copy, navigation, buttons, form controls, footer, and Briefing headlines.
- **Libre Baskerville (Serif)**: Header & footer brand name ('PSB & Associates LLP').
- **Georgia (System Serif)**: Italic decorative accent in Homepage hero (*'A clearer future.'*) and background art watermark ('&').
- **Times New Roman (Browser default)**: Renders on unstyled legacy redirect stubs (/industries/ & /resources/).

1. Global Typography System & Shared Layout Elements

9. Key Typography Inconsistencies & Technical Recommendations

1. Hero Headline Font Type Asymmetry (Homepage vs. Inner Pages):
*• **Homepage**: Uses a hybrid heading combining Manrope with Georgia Serif Italic ('Your business. Our expertise. A clearer future.').*
*• **Inner Pages**: All 20+ inner page headlines (About, Services, Partners, Careers, Contact, etc.) use 100% Manrope without any italic serif accent.*
• Recommendation: Either adopt the editorial serif accent across key inner page titles (e.g., 'Focused on understanding.' or 'Personally involved.') or standardize all H1 headlines to pure Manrope for uniformity.

2. Briefing Feed Headlines Font Override:
• Everywhere else on the site, <h3> elements use Manrope. In the Briefing feed, .news-item h3 explicitly switches to DM Sans.
• Recommendation: This is functional for density, but should be documented as an intentional text-hierarchy exception.

3. Unstyled Legacy Redirect Stubs (/industries/ and /resources/):
• The HTML generated in build.mjs (lines 101–105) does not link any CSS stylesheet. Visitors or bots landing on these routes see raw browser-default Times New Roman text.
• Recommendation: Inject the compiled site stylesheet into the redirect templates so fallback renders conform to the brand aesthetic.

4. Font Preloading Optimization:
• scripts/optimize-assets.mjs preloads dm-sans-latin.woff2 and manrope-latin.woff2, but omits libre-baskerville-latin.woff2.
• Recommendation: Add a preload tag for Libre Baskerville to eliminate any Flash of Unstyled Text (FOUT) on the header brand logo.
